CONTENTS

Part I. Mathematics and its applications

Billich Martin. Notion of distance for Euclidean plane	11
Bittnerová Daniela. The corollary of Green's theorem for curvilinear integrals	17
Frič Roman, Papčo Martin. Triangular structures and duality	23
Ger Roman. Stability of the equation of ring homomorphisms	29
Górnicka Anetta. Special partial orderings in simple graphs	37
Híc Pavel, Pokorný Milan. Randomly kC_n graphs	41
Jędrzejewski Jacek, Kowalczyk Stanisław. Remarks on connectivity and i -connectivity	49
Knop Jadwiga, Wróbel Małgorzata. Some properties of i -connected sets (part II)	55
Kowalczyk Stanisław. Problem of the existence of ω^* -primitive	61
Major Maciej. Applying the idea of fusionism in the probability theory	69
Mityushev Vladimir. Exponent in one of the variables	77
Novák Michal. Presentation of a new bilingual mathematical dictionary	81
Novikov Sergey. Under and exact estimates of complexity of algorithms for multi-peg tower of Hanoi problem	87
Povstenko Jurij. Anomalous diffusion equation and diffusive stresses	97
Šimsová Jana. Properties of Fourier coefficients of spline wavelets ..	101
Tikhonenko Oleg. General approach to determining the basic characteristics of queueing systems with finite total capacity ...	107
Yatsko Andrzej, Sudakov Rostislav. A new iterative method for solution of the dual problem of geometric programming	115

Part II. Theory of training teachers of mathematics

Balážová Jana. Communication in mathematics supported by information technologies	123
Bestrová Martina. The innovation access to mathematic education at an elementary school	131
Binterová Helena, Strachotová Zuzana. Word problems describing movement	137
Bryll Arkadiusz, Bryll Grzegorz, Rygał Grażyna. The use of finite expansions of functions for evaluation of limits	143
Bryll Arkadiusz, Bryll Grzegorz, Sochacki Robert. Recurrent equations for the arithmetical and geometrical sequences of higher degree	155
Bugajska-Jaszczołt Beata, Czajkowska Monika. Some aspects of teaching the concepts: arithmetic and weighted means at various levels of mathematical education	163
Cihlár Jiří. Analogical problems in the plane and space	171
Cihlár Jiří, Eisenmann Petr, Krátká Magdalena, Vopěnka Petr. About a distribution of points on a line segment	175
Eberová Jindřiška, Stopenová Anna. Compensation of students' handicap in mathematical disciplines	185
Florková Marcela. Gaining mathematical skills by using 'concrete' manipulatives	191
Folčán Michal. Mathematical statistics and mathematical didactics	199
Gerová Ľubica. Attention of teachers to pupils interested in mathematics in the 4th class at elementary school	207
Gunčaga Ján. Equations $f(x) = f^{-1}(x)$ as a generator of mathematics teaching problems	215
Hawro Justyna. About some difficulties in doing proofs encountered by the students from the first year of mathematics	221
Hodaňová Jitka. Mathematical task statement	227
Jagoda Edyta. From mirror reflection to the concept of line symmetry on the plane	233
Jędrzejewski Jacek. On objective and subjective difficulties in understanding the notions of the least upper bound and the greatest lower bound	245

Kaslová Michaela. Development of child constructions – inter-connection of research and students' training at school	249
Kopka Jan. Examples of investigations for beginners	257
Kováčik Štefan. Coefficients of learning in mathematical and nonmathematical subject matter	261
Laskowski Andrzej. The context of meaning and understanding of mathematics which helps students to understand its sense and see the area of its application	267
Maj Božena. The role of the multistage tasks in developing the creative activity of mathematics teachers	277
Major Joanna, Powązka Zbigniew. Some remarks on definition of the absolute value of the real number	283
Mokriš Marek. Electronic textbook in LMS Moodle	289
Nawolska Barbara. How many and what kind of stools can be built by a carpenter? – meaning how pedagogics students solved certain problems.	295
Novák Bohumil. Mathematics made popular: a chance for both pupils and teachers	303
Orłowska Jadwiga. The realisation of selected attributes of 'function' using the project method	311
Pardała Antoni. Problems teacher's practice forming mathematical activity and creativity of the gifted pupils	319
Perný Jaroslav. Mental manipulation with a net of a solid	329
Płocki Adam, Muzyczka Zofia. Geometric constructions as probabilistic spaces constructions	335
Powązka Zbigniew, Zareba Lidia. Teacher's studies students difficulties concerning the generalization of the concept of the Riemann integral	347
Prídavková Alena. Experiences with teaching course of "Fun Mathematics"	355
Příhonská Jana. Presentation software and it's use in teaching mathematics	359
Pytlak Marta. The role of interaction between students in the process of discovering the regularity	367
Rygał Grażyna, Bryll Grzegorz. About definition of a periodic function	375
Scholtzová Iveta. Geometry at primary school	381
Schubertová Slavomíra, Molnár Josef. A view from above or rather from below?	387

Slezáková Jana, Molnár Josef. Construction problems and their place in secondary school mathematics	395
Sochacki Robert, Bryll Grzegorz. On mistakes connected with differentiating	399
Soukup Jiří. ICT to assist math teaching at primary schools	407
Stańdo Jacek. The use of trial exams results for comparison of changes over 2005 and 2006	413
Swoboda Ewa. Geometrical activities as a tool for stimulating mathematical thinking of 4-7 years old children	417
Tisoň Miroslav. Using non-graphical programs for teaching mathematics (specialized for geometry)	423
Tkačik Štefan. Why logarithms?	429
Thustý Pavel, Rost Michael. Stochastics graphs and their applications	435
Uhlířová Martina. Classification of primary school teachers according to their attitudes to ICT educational implementation	441
Zdráhal Tomáš. Modulo arithmetic and modulo design	447
